

MACROFAN CLEAR TONE

the new solution for **effects**
with greatest **brilliance**

Caring about the differences!

MACROFAN CLEAR TONE

Macrofan Clear Tone are colorants of a new generation which, after being dissolved in Lechler clearcoats, will allow for effect colours to deliver high luminous intensity.

In recent years the car sector has stood out for an increasing attention towards the search of new «effect» colours able to enhance shapes of new models and make them even more appealing towards potential customers.

This has led to the introduction of pigments and production processes of new generation, which need innovative and special repair solutions.

The set of **Macrofan Clear Tone** consists of:

CT030 **Macrofan Clear Tone Red**

CT010 **Macrofan Clear Tone Yellow**

Each colorant is specially formulated to colour high technology clearcoats UHS MC405 and HS MC500.

Set of additives for coloured clearcoat

For the reproduction of new «effect» colours able to enhance shapes of objects and make them even more unique

These products, used inside special painting processes, allow to obtain extremely bright colours with much higher levels of brilliance, depth and specular reflection than normal colours, therefore, they cannot be reproduced by traditional products and methods.

In particular they allow to match some colours which were recently introduced in the car sector by some manufacturers, such as **Mazda, Nissan, Honda, Ford, Seat**, etc.

Colorants used in a mixture with MC405 or MC500 (80 parts of clearcoat), and according to the instructions of the technical data sheet, allow to obtain:

- Pure and deep colours
- High brightness
- Excellent vertical stability
- Excellent outside resistance
